

Engineering and Computer Science Lecture Series

Graduate School for Dummies

Dr. Greg Speegle

Feb. 22 at Noon

Roger's - Rm. 104

Question: How do professors solve really hard problems?

Answer: They lock a graduate student in a room and keep sliding pizzas under the door until the solution comes out! Here is your chance to learn what it is like to be locked in room and fed pizza, as well as the other incredible opportunities in graduate school. Learn how much it costs to go to graduate school (\$0). Learn how much your life can change in graduate school (lots). Even learn what it is like to enter the inner circle of academia (?).

**This talk is for Engineering and
Computer Science undergraduates.
A representative from each discipline will
be there to answer your questions.**
